Automatic gate

This automatic gate system offers seamless operation with a built-in control panel that integrates all electrical and mechanical components. It ensures security by automatically closing after a set time and uses a slow start and stop feature to provide smooth movement and reduce wear on the motor. The system can also be easily connected to external safety equipment like infrared sensors and warning lights for enhanced accident prevention.

Features and Capabilities

- **Integrated Control:** It features a built-in control panel, integrating the electrical and mechanical components for a compact design.
- **Automatic Closing:** The gate automatically closes after a set period of time, ensuring security.
- **Slow Start and Stop:** The intelligent control panel allows for a soft start and slow stop, which reduces wear and tear on the motor and provides smoother operation.
- **Safety Features:** The system can be connected to external safety equipment like infrared sensors and warning lights, which stop the gate's movement to prevent accidents.
- **Manual Override:** In the event of a power failure, a clutch can be disengaged to allow for manual opening and closing of the gate.
- **External Access Control Integration:** The gate can be connected to various access control systems, such as card readers, face recognition, or license plate recognition, for automated entry.
