## **GPS Motorcycle/Vehicle Tracker Model GT49 Tracking via platform, via mobile phone App**

This advanced vehicle tracker provides real-time location data via SMS or GPRS, including a direct Google Maps URL. It features comprehensive security alarms for over-speeding, movement, crashes, and engine status, with the ability to remotely cut off the engine. The device is suitable for a wide range of vehicles with its 10V-90V DC compatibility and has a built-in backup battery and IP67 water resistance for durability. It also includes a data logger, remote firmware updates (OTA), and A-GPS for faster signal acquisition.

## Features and Capabilities

- **Real-time Tracking and Location:** Track the vehicle by command SMS or Android Phone Software. You can get its real physical address, latitude, longitude, speed, and direction. A direct Google Maps URL is also available for quick location checks.
- **Safety and Security:** The device offers various alarms, including over-speed, movement, engine on, vibration, and turnover alarms. It also features an acceleration and deceleration (crash) alarm. You can remotely cut off the engine to stop the car safely via SMS/GPRS.
- **Power and Connectivity:** It works on a wide voltage range of 10V-90V DC, making it suitable for motorcycles, cars, and trucks. It has a built-in rechargeable backup battery that sends an alarm if the main power is cut or low. The device is also IP67 water-resistant.
- **Advanced Technology:** The system features a data logger that can store up to 5520 waypoints. The OTA (Over-The-Air) function allows for firmware upgrades remotely. It also has A-GPS for faster signal acquisition.
- **Smart Functions:** It can intelligently detect the engine's ON/OFF status without extra wiring. It also has an odometer function and provides engine ON/OFF status detection.
- **Optional Features:** You can add an SOS button, active RFID Driver ID identification, a wireless immobilizer, and analog input for fuel/temperature as optional features.
